buy the Reversion of any Lease or Annuity, work thus, Suppose the Lease to be thirty years in all; you find in these cond Table, and right hand against thirty, 13 years a months, and two tenth Parts of a months purchase; this it were worth, were it in present possession. But suppose there be a Lease of five years (more or less) before your Commence; look in the Table against the five Years, and there you find four Years, two Months, sive tenth parts, (or half a Months purchase) take this out of the sum against thirty, which is 13, 9, 2. less by 4, 2, 5. The remainder is 9, years six months, seven tenth parts of a month; and so much is the Reversion after sive years worth, the remainder of Thirty years. This is usefull and very easie.

Some Princes have been Sirnam'd Red, fome Black; Some Tall, some Crook'd (as well in Mind as) Back: Some for their Learning, some for Valour stand Admired, by this Learn'd and Warlike-Land: Our Gracious King's both Black and Tall of Stature, Learn'd, Valiant, Wise, and Lib'ral too by Nature.

But that Adorns Him more than all the rest Is Mercy in his most Religious Breast: Which mix'd with Justice, makes him thus to shine Ib' Incensed Glory of the Royal Line. Sr. G. W.

Astronomy (saith the Schools) est Calessium Orbium Sydeyumque Scientia. And for Antiquity, is the most ancient of all Sciences; and although all Ages (in some part of the world or other) have been still endeavouring to improve it, yet of all natural Knowledge this hath had the slowest Improvement.

Nor do I think these things only helpful to Epicarus's Disciples, but that they have been and are highly necessary and fuseful to all that are conversant in Calchies and Proficed Studies; and although it cannot be said, that yet although or any other part of Natural Philosoph is perfect with these; yet all will own them less compleat without these helps.

Now the thing call'd Realon is as little to be trufted in this Science as in any other fort of Learning, for whilft fome of its mafters defends the Earths motion, yet fill are there others (that have no mean opinion of themselves) who as fercely dispute against it, and damn the opinions of those which aver its motion as whimsical and rediculous.

#### OCTOBER, 1685.

However this can be no Argument to the contrary, but that a Alvelogy is a fludy exceeding commendate & u.cful, & as Cordan truly fay's, Altifima Scientiatum off, &c. But if the Antigonist will thill urge trivolous arguments against it, then I shall defire him to answer me these queries.

#### NOVEMBER. 1685.

What is the cause of the mutation of the Air? How comes it to pass that the Sea follows the motion of the Moan so obsequiously as we see she doth? Where lyes or from whence is the cause of contagious and Pessishinial diseases? Why should many in the world use their utmost endeavours to be rich, &... and ver perhaps dye in Prison?

#### DECEMBER, 1685

Divinity will inform us, that such Contingencies are the will of God, and there are none I hope will deny the same, for we must all own that such things are the effects of an all-ruling Providence, which seldom acts without a secundary of cause, and every Chistian should own Fate no farther then its subservience of providence, the Divis Dr. Passage.

# Pol morten cellat invidia.

Tistaid that anger is a fit of Frenzy and fornetimes bage & madnel -- About, this rime we may expect to hear of ma. my firange Ads of Pallion, perhops in the fore lative degree, but the late half of the month promifes better thing. we know that one jaming firing puts a l the reft out of Tune, as one urraly companion miy fpoyl the peace of a whole fociety, men of different Judg. ments are not yes farified & too often de irrare in veria Marifire) orpole what they do not truely apprehend to be in their fei fe Authentick --- But thanks be to God things are brought now to that order, that we find very www exturfiors or irregularities, every man may enjoy the fruit of his labours in peace, and Tranquility, (which is a felicity that thousands in Remote Countries would be glad to enjoy ) But nothing is fi full of change and Alteration as man all I shall say more here is, this, that a fober pace never tyres ... and the way to perfection is to change for the better. Vitrat Carolus Secundus Ren Magna Britannia.

This Table thews the Interest of any sum of Money from 1 s. to 100s. from a day to a year. And by the help of Addition you may compute the Interest of any sum whatsoever. And note, that for the greater exactness the peny is divided into 100 parts; so that 25 Parts are a farthing, and 50 parts an half-peny, and 75 parts 3 farthings, oc.

Example:

. The Interest of 100 % for fix months one week and one day, is thus found by the Table.

# Aftrological Observations for the Year 1685.

Dicamus bona verba; Deus Regit Asira seruntur, &c.
Thus significantly rendred by a Friend:—we begin—viz.
God moves the Heavens, and his mighty hand
Both Planets, Earth, and Ocean doth command.
But we, alas! are now so wicked grown,
That threatning Stars our vileues do bemoan, (groan.)
And with our weighty sins both Heaven and Earth do.

1. Observations upon the Winter-Quarter. WE are yet under the effects of the last Conjunctions of the superiour Planets in Las, as also of the late amazing Comets, ftill fresh in our memory, of which much (already) has been written, and more promised, and therefore dayly expected --- Eft Natura bominum novitatis avida. There are many notable Configurations of the Planets this year, as may be feen by the Synoplis; which doubtless may have as various effects, throughout the whole European world. The tedious Transit of Mars through the Sign Sagittary, and no less than three times meeting with a Quartile of Saturn in Virgo, feems to menace many Kingdoms and Countries under those and their opposite Signs, with much Mortality, and other terrible Difasters; of which more in the sequel of this Discourse ] ... The Winter- Quarter begins December the 19th 1684, 27 min. paft 8 at night; at which time the Sun enters the first Scruple of the Tropical Sign Capricorn: The Midheaven at that instant is 9 deg. of Taurus, the Afcendant 23 deg. of that Regal Sign Leo, the Moon is then in Gemini in Square to Saturn, and applies to the Trine of Jupiter and Trine of Mars, and laftly to the Opposition of the Sun: fo that this Tropical Scheme ushers in a Full Moon, and is therefore the more confiderable. To which may be added --- Many are the benevolent Configurations of the Planets in and pear the fame All which confidered, (together with the fixation of the Angles) denotes then a fetled quiet Season, especially the former part of this Quarter, viz. December and January. But about the latter end of January thence to the Spring-Quarter, many notable Councils in most parts of Europe will be held to debate matters of more than ordinary concernment in every individual Nation and Kingdom; of which we shall be farther informed

informed in convenient time, .... There is no doubt but we in the Kingdom of England remain in Peace and much Tranquillity, as Loyal Subjects ought to do; I pray God continue the fame : But if there be yet any diffatisfied Spirits amongft us that will still be uneafie to themselves in disturbing the Government by Plotting and Conspiracy (as too lately they have done ) let them enjoy the meries of their deferts. We know some men cannot imagine it to be reasonable, that their private defires should subscribe to publick necessity and others again have a kind of unnatural Civil War in their own breafts, which guides (or rather forces) their resolurions .--- But let them know, that to attempt at random, is full of danger and hazard---Ignem igni ne addas. It has pleased the Almighty hitherto to transmit the dire effects threatned by the Planetary Configurations and Appearances before mentioned (perhaps by his Ministring Angels) from us, into more remote parts of the World; as to the Turks, Polanders, Hungarians, Spaniards, &c. who have been and are like to continue in much action for fome years: nor may the Turk expect to conquer the Christians, as some have soolishly and at random too positively predicted. 'Tis Time is the Touchstone of Truth; and we know that the advantage of Time and Opportunity leads humane Actions as it were by the hand to their perfection .--- But some mens confidence is far greater than fuirs with ( or becomes ) their Birth or Education. Yet I say 'tis necessary for us to learn ( and endeavour to obey, before we ( so much as attempt to ) hope to command .--

He undisturb'd with Storms and Fempests rides, Whose unaspiring Barque the calm shore glides.

In the Calefilal Figure the Moon is elevated in the principal Angle of the Figure, in exact Square to Saturn, but hasting to the Trine of Jupiter and Mars: The Moon represents the People in general of this our Nation; they have been, and many of them doubtless still remain much distaisfied in their minds and judgments, as is plainly signified by the Quadrate of Saturn aforesaid: but then she is hasting to the Benevolent Trine of the other two Superiors, which in Starry Dialect declares they are coming over to a solid Resormation, and a free Submission to their Superiours; whence managements whence managements are superiors.

C

turally

# Astrological Observations for the Year 1685.

turally follows much quietness and peace to themselves—them a general Unity, and Conformity to the Government as 'tis now Established—And thus we may see that sometimes a fair Sun-shine follows the heels of the sharpest Tempest.—Last, the weather this Quarter should be various, with much Wet or Snow, high Winds Westerly and South-West, with a cold sharp Air, &c. of which, see more in the Kalendar-part. The Diseases incident this Quarter, should be dry Coughs, Griping of the Guts, Scurvy, Dropsie, fore Throats, Convulsions in Children, Tumours in the Legs and Knees, &c. And thus much upon the Winter-Quarter.—I conclude in the words of the Poet, viz.

If any have imbosom'd Errour so, To hatch it still, though they the danger know, . At their own peril be't: they pity find Who lose their eyes, but not who will be blind.

II. Of the Spring-Quarter.

Which this year commenceth, according to the Rudolphine Tables and fome others) March 9. 8 h. 21 min. PM. at which time about a deg. of Leo culminates, and 25 deg. of Libra afcends in our Latitude: but by some other Tables of good efleem, we shall have the second or third Decanate of that Treacherous Sign Scorpio arise: But take it either way, 'tis near a Full Moon, who defluxes from a Conjunction of Saturn, and haftens to the opposition of the Sun. The Planets places for Noon that day, may be seen by the preceding Ephemeris, as also their Aspects; which those that understand, may be pleafed to confult, in regard I have first something else to say in vindication of my felf and others of the same Profession, concerning the last Great Froft, &c. In the late Tedious Froft I have (my felf) heard many perions rashly condemn all our Annual Writers, in that they did not plainly Foretel or Predict the same; and amongst the rest, the Author of Modest Observations (T. T.) upon the faid Frost, shoots his Bolt in Print, thus: viz. --- Yet I find not that any of our common Pretenders had the least apprehension, or gave any hints thereof. Not that I wholly explode Astrology; I believe there is fomething in it, and that it may not be unfit for a wife and bodeft man to fludy: But our Annual Prognosticators are

egenerally men of little Learning, and less Philosophy, and (what is worse) many times Irregular in their Lives, &c. And so he goes on with his Reflections strangely gross and abufive .-- And farther, faith he, whether from the late Triple Conjunctions of the two Superiour Planets, Saturn and Jupiter, or from some of the late unusually-frequent Comets, parcicularly the last, August 1682, which in twenty days with a Rapid Motion making its appearance in Leo, hurried through 'all the Signs Virgo and Libra, and disappear'd in Scorpio, 2 Sagacious Artist might not have given some Items of this ftrange Weather, I will not determine. Thus far this conceited Gentleman, who thinks he has hit the Nail on the head, and pretends to fee farther into a Mill-ftone than we Illiterate Almanach-makers can. These are his very words, which have been already answered by Richard Kerby in his Diurnal Speculum for the year 1684. I must consess 'tis no easie matter for the best of Astrologers to guess exactly at the Weather: the aforefaid Author T. T. I prefume, would find it a very difficult point, notwithstanding all his Learning and Philosophy, to discharge himself in such a difficult matter: we pretend not to Infallibility; we are but men, and every modest man will acknowledge Humanum est errare. But to give this person some satisfaction, I affirm this Continued Frost to be part of the effects of the two late Comets (and the aforefaid eminent Triple Conjunction) and that some hines have been given thereof by feveral of our common Pretenders or Annual Writers; and amongst the rest, in Januarys Observations for the year 1664, he may read these words in Merlinus Anglicus, viz. [ And the Weather hould be extream in its kind ]. But perhaps it may be objected, That these words are too general. Then confider what was written upon the Comet of 1680, in Merlinus Anglicus, 1682, at the end of the first sheer, from Junctine; the words are these: ( immediately after the Verses of Dubartus of Blazing-Stars ) . This Comet was of a pale Saturnine colour, and Oceidental of the Sun: Cometa Orientalis, &c. an Oriental Comet doth suddenly shew its effects, but 'an Occidental Comet doth it more flowly and deliberately, and therefore we cannot fuddenly expect its Operations and Effects. This Conet is seconded by a famous Conjunction of Saturn and Tugiter, and may put forward or aggravate the

C

# Aftrological Observations for the Year 1685.

effects thereof. Junctine writes, that any Comet of the me ture of Saturn, fignifies many pernicious and ffrange kinde Evils to happen amongst men : for Saturn is a Plante ene ' mical to Nature and all existencies thereof, and many times produces Famine, Plague, Exile, Penury, Grief, Trouble, and Vexation, and an absolute destruction of all things that grow on the Earth ufeful for Man or Beaft; Excellive cold Air. GREAT FROSTS and Snows, high tempertuous Winds Shipwrack, and damage in Navigation; a destruction and want of Fish, great Inundation and Storms, Locusts and Ca terpillers in abundance destroying the Fruits of the Earth .-And in the last sheet, towards the end of my Nuncius for the fame year, upon the Comet, you may read these words, viz Poverty, Want, with Sudden Terrour and Astonishments, up-' usual Tempests, Obseure Weather, many Shipwracks, many Piracies, great flore of Snow in its feafon, the Fruits de ftroyed by Vermine, strange and unaccustomed Flouds, mighty Inundations in some places, Long-continued Frosts sicucity of Grain of most forts, uncomfortable Harvests, Oc-The like may be found in some other Almanacks (or words to the fame effect ) and many more hints might be produced from these; but I conclude here is testimony sufficient to satisfie any reasonable man that the Late Frost was hinted at, and many other matters which we have found to be true; as that of Caterpillers, cum multis aliis: And now I hope for the future our Modest Observator will be more modest in his Censures. Which is all need be faid upon this Subject by me; the second part he may expect from fome other .--- And fo I leave him to the study of Health, Long Life, and Happines, &c .--- and proceed to the confideration of the Spring-Quarter mentioned at the beginning of this Section --- at which time there are many confiderable Configurations of the Planets, which import thus much, viz. a general complaint for want of Trade, many break and are exposed to great hazard and misfortune, with divers other Enormities that more or less afflict and perplex the people.

There's great complaint abroad that Trading's bad; Men shake their heads, and cry, 'Tis sad,' tis sad, &cc. Mars bears great dominion in this Vernal Quarter, as being

Mars bears great dominion in this Vernal Quarter, as being with a violent fixed Star of his own nature, viz. the Scotpions

here, and is posited between the Quartile of Saturn on the one fide, and Venus and Mercury on the other; and hence people will be most easily inclin'd to Passion and rash Actions. which end in Quarrels, Contentions, Law-fuits, Mutinies, Duels, e.c. much to their prejudice, and to tome no less than utter Rune. We fear also much unseasonable Weather, and do now he by experience, that after a tedious, bitter, pinching, Frofty Vinter, follows an Exceffive bot dry parching Summer. They are the words of the Learned Lord Bacon in his Advancement of Learning, viz. that the Operations of the Heavens have their Influx and Dominion not in points and narrow minutesof times, but in greater spaces. Therefore faith he, Prognosscations of the Temperatures of the year may be true. but not upon particular days. And farther, 'twas his judgment that he Caleftial Bodies have other Influences besides that of Light and Heat; he pleads for a Rectification of Aftrology also and then it may be called Sound Aftrology: I hope there are some notable heads at work about the same, which I should be glad to see. The aforesaid Author has given some Rules and Directions therein; and amongst all the Parts, he approves the Doctrine of Grand Revolutions ! Let the greater Revolutions be retained, and the leffer Houses and Horoscopes casheer'd are his own words. And he farther tells us, He doth accept of Astrology as a Portion of Natural Philosophy, and yet attributes to it no more Credit than Reason, and the evidence of particulars do evince, letting aside Superstitions and Fiftions ---- And that all the Planets, as well as the Sur, have their Summers, and their Winters, wherein they dart down more forcible or more feeble Rays, according to their Position, in respect of the Perpendicular: for without question the Moon in Leo works more forcibly upon natural Bodies here below, than when the is in Pifces, and not because the Moon in Leo hath reference to the heart, and in Pisces the feet. Thus far this Learned Author; and fince he, D. Placidus de Titis in his Primum-Mobile printed in Italy 1657, hath published his Colestial Philosophy (or at least some part thereof) and upon these Principles he has endeavour'd to reclifie the Genethliacal part, exemplified in 30 Genitures of Great Persons; there we may read something of the Parallels of the Planets, of their Aspetts in the Zodiack, and in the World, or from the particular Houses.

Houses, &c. also Tables of Houses for several Latitudes, fair to be according to Ptolomy, wherein the Angles are the ame with those of Regiomentanus, but the Intermediate House disferent; and of all the varieties of this Author, we may hore ly expect an Account, I hope to good purpose .--- But proceed to the farther confideration of the Spring-Quarter which I fear may produce more of Gall than Honey: The Su: is the natural or proper fignificator of the Magistrate, or these perfons that rule and govern: The Moon repreferts the Vulgar fort or Common People; the is not onely in Conjunction with a Retrograde fullen Saturn, but is hasting to the Oppistion of the Sun from Aguinostial Signs, and is thereby much ifflicted, and confequently shews an uneafiness or great distartaction, with murmuring and repining of many or most of the meaner fort, not onely in England, but in many other parts of Europe, as in Spain and Italy, France, Germany, &c. aggravated by the tedious Transit of Mars through the Sign Sagittay: Too many will be apt to Matiny and Rebel against their Siperious in some of the Countries aforesaid, which they will have cause to repent too late. But Fove and Venus are in frierdly reception, and Mars is disposed of by Jupiter, who is in the Sign of Juffice; whence I may conclude, that by the graveWildom, Policy, and Prudence of some just men, the Extravagancy and Madness of the Vulgar will be much abated and consequently they may be thereby reduc'd to much Order and Conformity notens votens, and thereby a Popular Confusion prevented, more particularly in those places far remote from us Eastward.

For where the Honey does so open lie, A thousand Washs about it flie .---

by a continual diving and stareb into the Secrets of Nature, IN FA L L I B L T to align either the prime Causes or exact Times of Insectious Airs in every particular Hingdom or Country, as also excessive Heats and Droughts, prodigious Flouds, redious pinching Frosts, and such-like wondersul alterations in the Macrocosm, viz. the various state of the Universe or great World.—The Diseases of this Spring should in all probability proceed from much corruption of Bloud, as Small-pox, Fevers of all forts, Surfeits, Griping of the Guts, Voniting, and a strange insectious Air in many Countries even of our own Nation: From a Plague and Positience, let us yet all pray, Good Lord deliver us. And thus I proceed to the consideration of, and Observations upon

#### III. The Summer-Quarter,

Which this year commenceth June 10. 53 min. past 10 at night; at which time we have about 15 deg. of Sagittary culminating, and 23 deg. of Aquary ascending; the Moon defluxes from the Trine of Jupiter, and applies to the Trine of Venus, Mercury, and the Sun: And thus the Summer- Quarter initiates most favourably; May the Actions and Transactions thereof be as hopeful and propitious to us, as I doubt not but they may, for the Configurations of the Planets throughout the whole month appear in the general more friendly than enemical; and great Effects cannot be effected but from great Causes, according to the Author, who says, Stultum est magnos iffectus abig; magnis fieri causis credere, &c. Many serious and healing Consultations now on foot tending to the general satisfaction of most persons, or at least a pacification of just and honest desires; the Golden Mean is to be embraced, which may qualifie the Diftempers of the most diffatisfied and perulant Spirits. Jupiter is now in the Sign of Justice, and dispoles of Mars, and aptly denotes the fame. Moreover, Mars constituitur significare Turcas, Tartares, similesq; Tyrannicas; vir. It is generally supposed that Mars doth signific the Turbs, Tartare, and fuch-like Tyrannical People: and if fo, in regard Mars meets three Trines with the Quartile of Saturn, what may be expected amongst them, but great Commorlons. Wars, Bloudshed, and such-ike Disasters, both amongst themselves, and from those Christians that they endeavour to conquer and actiroy ?

destroy? and in that very Attempt many of them must all redly expect to perish. Now take those Brutish Heathers in be fignified either by Mars or Saturn, and the judgment's the same; but I rather judge Saturn their Significator; or if Saturn and Mars together may be accepted, 'tis to me the more rational --- And if they defigne any new Project or Smatagem, notwithstanding their vast strength, yet 'tis my judge ment they must expect to fail of their expectation, and in the end come off with much loss and diffeonour .--- Now if this Judgment be crown'd with happy success, the Grand Seignin will curse some of the English Prophets, which doubtless he has long fince heard of, and for the future laugh at fuch peltive Confidence as foolish presumption, &c. The Diseases of this Summer-Quarter thould be many, viz. rotten putrid Fevers, the Small-pox to purpole, Colicks, Griping of the Gur, Surfeits, the Stone, with Gravel in the Reins and Kidneys, on cum multis alis; the cure of all which, must be left to the care of learned and able Physicians throughout the whole Nation And for the Weather and other Particulars, confult the Kalisdar-part, and Observations.

#### IV. The Autumnal or Harvest-Quarter,

Which this year begins September the 12th, 2 h. 14 m. PM. at which time we have about 17 deg. of Capricorn culminating, and II deg. of Taurus aftending; the Moon Separates from the Opposition of Mars, and hastens to the Quadrati-Aspects of Venus, Mercury, and Jupiter; therefore those three last are in (or near) Conjunction: and Mars has just lesc the Sign Sagittary, wherein he has made his Transit for many months, and new keeps Court in the Tropical Sign Capricors, the Dignities of Saturn, and the Sign in which he is faid to be exalted .--- By this time certainly we have feen or heard of many notable Overtures this last Summer, both at home and abroad; and now we may expect to hear of some Martial Active Person resolving to take new Measures, and those perhaps very confiderable. The late flow Transit of Mars through Sagittary did a little concern those Countries under and oppofite to the fame, which you may read at large in my Clavis, pag.91.893. I hope the populous and famous City of London · received no Injury thereby. And as for the Affairs of this Duarter.

this Y ter Duarter (which continues till the Sun enters Capricorn, Deumb. 10. ) I prefume they may and will be carried on with much prudence, and no less grandeur, to the general satisfa-Rion of the whole Nation; which I pray God preserve in much Health, Peace, and Safety, --- Et vivat Rex Magne Britannie. 'Tis a calm time in general, and therefore little of Aation may be expected abroad, or any new matter confiderable at home; yet Power and Majesty can brook no Equals:the Poor live best with the Poor, as Bets thrive together in a Swarm; but the Sheep are in continual fear when the Wolf is near. The Difeates hereof are not much different from what they use to be; and for Particulars in this Quarter, consult the Monthly Observations. And thus I conclude the 4 Quarters.

My little Ship doth on the Ocean fleet, That every Circumspecting Eye may fee't: Now in her Voyage, left the chance to fail. 'Tis my request the may have happy fail.

V. Of the Eclipses of this Tear,

Which are in number three, viz. one of the Sun, and two of the Moon. . The first of the Moon happens June the 6th, at 40 m. past 5. and therefore invisible to us, in regard the Moon is not then above our Horizon; but twill be visible in the South-East parts, and a great Eclipse, being at least 18 digits obscur'd. The second will be of the Sun, June 21. 2bout 20 m. after 8; but by reason of the Moons Parallax in Longitude, it becomes invisible to us; and yet may be seen in the North-West parts of the World at least half eclipsed. The third and laft Eclipse is of the Moon, Novemb. the 20th, 28 m. past 10 at night, and may be seen and observed too, if the Air be clear: the beginning will be at 8 h. 23' 50", the beginning of Total Darkness at 9 h. 31' 50", the end of Total Darkness 11 h. 26 46", and the final end at 12 h. 34' 48' PM. The digits eelipfed will be at least 21, and the whole duration about 4 hours and near a quarter .-- By Altronomia Infaurata, V.W. But by the British Tables, the beginning should be at 8h. 29' 1", the beginning of Total Darkness 9h. 38' 8, the end of Total Darkness 11 h. 27 18", time of Total Darkness 1 h. 49' 10', Total Duration 4 h. 7' 22', greatest Observation to h. 32' 43". Digits eclipfed 20.35.25. and therefore 'twill

## Astrologica' Observations for the Year 1685.

be almost central. It falls in the Sign Gemini, the Ascendant of the Metropolitan City of London. What the effects of this Eclipse may be, has been considered (in a general way) in the precedent Judgments, but has little or no operation all the year 1686 (or the Winter-Quarter 1685). Authors tell usthe an Eclipse of the Sun or Moon in the Airy Triplicity, shews Scarcity or Famine approaching in some places of the Worldmost violent and fierce Sicknesses, Pestilent Diseases, storm high Winds very prejudicial to mankind, which blow down Houses, and Trees also by the roots. It also fignifies the sud den motion of Armies, and points out the death of some famous person, either Divine or Lawyer.

> The Epilogue or Conclusion. I am confin'd, my limits bid me ftay My Pen, and to the Pres fend post away. As for th' Errata's, whatfo'ere they be. Let them be pardon'd, you'll deal candidly : For all men write according to their skill, And to do I, and that I hope's no illa Provided I do no Reflections make. And constantly Disloyalty forfabe. If fo, there's nothing wanting, Sirs, in this, To please the honest-meaning fort, that is My chief designe ; which if I mis it here, I'll try what may be done another year : Tet I am fure to pleasure some, the rest May please themselves with what will please them best. But to my Friends, I will good health as mine is, And of a constant Happiness no FINIS.

### ADVERTISEMENTS.
